

Telemmeet

TELEWORKR VIDEO CONFERENCING SOLUTION

What is Telemeet?

Telemeet is a videotelephony application bundled by TekMonks built-in to their premier product, the Teleworkr. It also made available to other B2B ecommerce products, the TeleScholr and TeleDoctr. A secured online communication designed to be stand-alone or dependent to schools, organizations, companies, or any institutions. Whether for distance learning, video conferencing, and virtual meeting. Functions include:

- real time chatting
- file sharing
- presentations and video display
- remote desktop

Privacy

Do you want your video to go through a third party? Or US Government servers? Or ISP? I think Thai government for sure can't afford this at all.

Encryption

End to end AES-256 encryption by default, and doesn't use any third-party servers at all. Zoom claims encryption but their servers are in their own cloud. How can this be trusted?

Enterprise Integration

Full integration with Enterprise login - zoom needs separate accounts.

Video Conference Recordings

Do you really want to store your video on Cloud, or on US servers?

Full Control

With Telemeet you can be sure there is no spyware, as you control its network firewall, so you know which servers it talks to.

No Hacking

Telemeet can enforce room controls - supporting – Enterprise only room (no external participants allowed), Enterprise + Partner rooms - for calls between the company and its clients, Public rooms - for public webinars etc.

Auditable

So you can be sure it is PCI compliant - if you discuss a client details for example, on a call or chat, it stays inside. Otherwise, your company will break audits - remember DGA - they don't realize but they are breaking audits if they attend video calls on zoom and discuss privileged data. Most IT staff don't know audit requirements for Govt Audits, or PCI, or BASEL etc. But they will get burnt later - move to Telemeet and avoid such issues later on.

Features List

- Up to 1000 participant conference calls
- Waiting room function
- Breakout Room function
- Text message feature
- Support dial in audio only participation
- Support web link (no app required)
- Support content sharing, allowing presenter to take control of the shared content
