# API400

API 400 Solution
WHAT IF

What if we could directly expose the existing rules, data and modules as modern APIs?

- At native speed – and native level scalability.

- With native AS/400 or Mainframe technology.

- Made and integrated with COBOL/batch-based systems
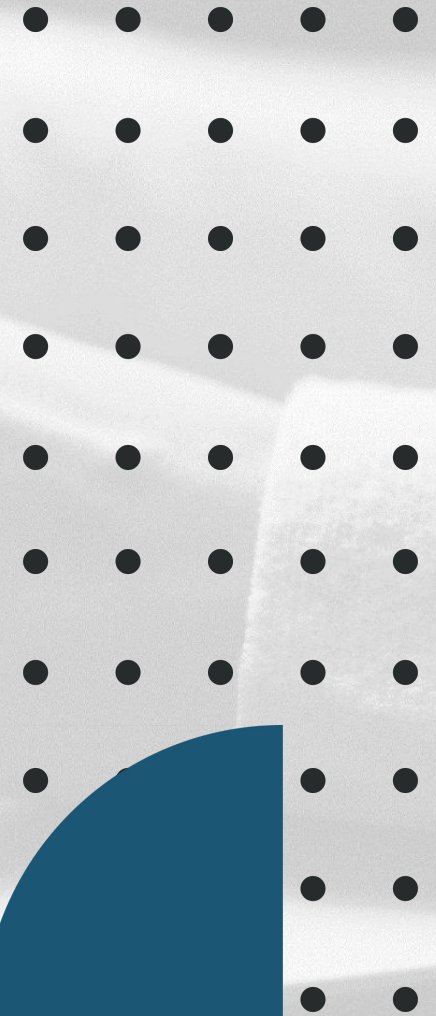

- Which was IBM approved.

TekMonks' API/400 product allows creating API based services quickly. Capability is provided to directly expose as APIs

- **RPG, COBOL, CL Programs**

- **DB/400 data**

- **Physical Files**

- **Data Files**

- **Data Queues**

DEMO
2 APIS

Agenda

- **1st API - Integration with other 3P APIs**

  We will call an external API that provides us an invoice, and insert

  the information into a DB on the AS400.

```
{
    result: true,
    data: {
        invoiceId: "#39356",
        invoiceDate: "2022-06-20T15:23:21.475Z",
        businessName: "Cool Business",
        address: "Dapper address",
        email: "myemail@superb.com",
        phone: "9878986743",
        billTo: "Superb Customer Bill",
        billAddress: "Customer Address 4",
        shipTo: "Cool Customer Ship",
        shipAddress: "Customer Ship Address 2",
        products: [
            {productName: "Product 1", productDesc: "Product 1 Des
            {productName: "Product 3", productDesc: "Product 1 Des
        ]
    }
}
```

Agenda

- **2nd API - PGM Called Natively**

  We will showcase an API that calls a program on the as400 and can

  pass back information that was not presented on the actual screen.
